

BELT CONVEYOR

- Conveyor belts can be customized in size and materials to suit production needs allowing for the handling of a wide range of materials.
- The conveyors are equipped with an accessible and easily adjustable tensioning system ensuring easy maintenance and extended machine life.
- Belts are designed to be self-centering on the roller, reducing the need for maintenance for continuous, reliable operation.
- A wide range of accessories are offered, including material press, guide rollers, measuring and printing systems as well as product tension control systems. These accessories allow us to further customize the conveyor to meet specific application needs. The motorization can be classic AC or brushless for precise control over the transport speed.

Belt conveyors are designed to meet the different needs of transporting materials in the industrial sector. With belts available in different sizes and materials, and a wide range of accessories, our conveyors offer an efficient and customizable solution for transporting materials in a precise and controlled manner.
