

PRINTING STATION

- Built with a solid aluminum structure, ensuring stability and durability over time.
- The height of the printheads is adjustable based on current production needs, offering customized control.
- An automatic cleaning is performed when requested by the PLC
- Able to detect the position of the pipes thanks to specific sensor, complete with automatic print head positioning system.
- Palletiser and weighing station are available as optional at the end of the line.
- The motorized linear guide, with brushless motor, offers perfect control over the position during the process.

Our printing systems stand out for their versatility, precision and ease of use, offering an excellent solution for printing on rubber products. Its modular configuration and ability to adapt to different sizes and shapes make it an ideal choice for the dynamic needs of production lines. This versatile machine is ideal for printing on finished products, such as rubber tubes or sheets, offering a flexible and high precision solution.
