

ROLL CONVEYOR

- Custom modifications for diameter and distance between roller centers allow to adapt to specific production needs and manage a wide range of materials.
- easy and accessible chain tensioning system to ensure easy maintenance and a long life of the conveyor.
- The rollers are made with high precision to have a smooth and reliable movement of the materials and their quality helps to reduce needed maintenance.
- wide range of accessories available such as guide rollers, measuring and printing systems or product tension control systems. These accessories allow for additional customization to meet specific application needs.

Roller conveyors are designed for the efficient movement of a wide variety of industrial materials. With customizable rollers in terms of diameter and center distance, an accessible chain tensioning system and high-precision rollers, they offer a reliable, low-maintenance solution.

TYPICAL ROLL CONVEYOR
